

**Are you using recycled polymers like PP, PE, PA, PS, ABS and search for a solution to optimize your process and products?**

To increase the processability of recycled Polymers and contribute to circular economy, we developed and launched a range of

**COMPATIBILIZER - PRODUCTS**

## **MaxiLoop Compatibilizers are designed for:**

- Recycler – PCR and PIR polymers**
- Packaging – film producers, injection, blow molding**
- Technical Applications – to increase the recycled content and mechanical properties**

## **With the benefit of:**

- Modify mechanical properties**
- Improve processability**
- Increase miscibility**
- Mask contaminations**

## **Capabilities of MaxiLoop - Compatibilizers:**

- Increase the quality of the product**
- Increase the recycled content in the product**
- Solve processing issues**
- Prepare the polymer for their second life in use**
- Improve mechanical properties**
- Act as coupling agent and regulate microstructures in recycled polymers**
- Suitable for food contact applications**
